

SKU Set-Up Sheet -Changes to Packaging Material Categories

In response to changes in packaging material categories required for reporting by Circular Materials, Recycle BC, Multi-Material Stewardship Manitoba, Recycle SK, and Éco Entreprises Québec, Best Buy Canada is making changes to the Product Compliance section of the SKU set-up form for all Vendors.

Changes to packaging material categories include the disaggregation of various plastic categories into separate categories by colour and transparency, disaggregation of paper laminates to include polycoated laminate paperboard and polycoated laminate paper, inclusion of certified compostable packaging, and alternative packaging materials. It is recommended that vendors check the Circular Materials [website](#) for more information on new material categories.

As a reminder, Vendors are solely responsible for ensuring the accuracy of the information required under these policies. Exhibit B of our Warranty Returns and Service policy describes our rights to return product where compliance or regulatory information is incorrect and/or incomplete.

Neither Best Buy nor its associates can provide guidance about the specific programs or their requirements. All partners should familiarize themselves with the regulations, programs, and upcoming changes by visiting the Circular Materials [website](#) .
